## SCAV Announces New Inventory

SCAV is pleased to announce the additions of the following new equipment to our rental inventory.

2 new Barco RLM W12 Projectors, delivering stunning high definition images at 12,000 lumens of light output.

Its' features include:

- 12,000 lumens light output
- 3-chip DLP technology
- Super silent projector
- Low power consumption
- WUXGA resolution
- Standard active 3D
- Better color stability & saturation
- Perfect for staging
- Fly kit
- Wide range of TLD lenses, compatible with HDX & FLM projectors
- Control over IP

And there's more.....

And we added a new digital video recorder.

The Ronin recorder, player and monitor is a ½ RU rack-mountable smart solution for professionals working in both fixed-facility and on-location video production. The Ronin captures pristine 10-bit 4:2:2 video and audio direct from any camera with HD/SD-SDI output. An Atomos Connect H2S and/or S2H can be added to the Ronin for HDMI capability.

From an intuitive touchscreen, it captures to Apple ProRes or Avid DNxHD and allows professional monitoring and edit review on the fly. Key features of the Ronin's AtomOS operating system include record triggering via a start/stop flag or timecode, SmartMonitor focus/exposure monitoring assist (including focus peaking and false colour) and SmartLog for pre-editing (reviewing, marking and tagging) footage in real-time.

In addition, the Ronin offers balanced XLR inputs and outputs and a front panel headphone jack with channel monitoring selections.

Continuous Power on the Ronin allows you to unplug the depleted battery and replace it with a fully charged one without interrupting recording. The Ronin can operate on location with battery or DC power. It can also be used in a fixed facility, rack-mounted environment using AC power.
